

DAIRYSAFE has an obligation to actively promote food safety learnings that are important to your business.

---

**Key points –**

- Dairysafe has scheduled **FREE** workshops in 2020
  - The workshops are aimed at owners, managers, QA and operational staff
  - Dairysafe is also looking to facilitate a dairy manufacturer / QA Forum
  - Dairysafe is considering facilitating a 3-day pasteuriser operator's course
- 

As an immediate action from Dairysafe's training research project, reviewing training in the dairy manufacturing sector, Dairysafe is providing a 2020 workshop series on the following aspects of manufacturing:

- Shelf-life validation
- Labelling, identification and traceability
- Pasteurisation
- Milk cooling and the Early Milk Collection Index

The aim is to provide **FREE** workshops in central and regional locations for owners, managers, QA and production staff, similar to the Dairysafe workshops provided in September last year.

Dairysafe is also responding to feedback from manufacturers on the benefits of a forum for artisans, small/medium size businesses and QA Managers to discuss around the table or online key issues about food safety, processing, new information and technologies. We fully support this collaboration which is an important part of our industry's continuous improvement philosophy - more details will be provided on this proposal.

Dairysafe is also negotiating with a provider on the costing for a full 3-day pasteuriser operator's course. This course will be held on a fee for service basis, limited to 6 attendees and offered via expression of interest – further details will be provided.
